Performance Update

June 13, 2017

For Grain Week 44 (2016-17 CY)

Summary

Stocks in Store: (Page 2)

- Country stocks increased to 2.5 MMT in week 44 utilizing 52% of the system's working capacity. Space in country elevators is good. Producer deliveries were 1.0 MMT in week 44.
- Total western port terminal stocks remained at 1.1 MMT in week 44, utilizing 65% of the working capacity.

Railway Car Supply: (Page 3)

- Railcar allocation plans are supplied by CN to week 46 of the 2016-17 grain year (see page 3 for details).

Port Unloads: (Page 5 & 6)

- Total western port unloads are 16% lower than the 4-week rolling average and 9% higher than week 44 last year.
- West Coast unloads were 4,715 cars (Vancouver 3,467 and Prince Rupert 1,248), 17% lower than the 4-week rolling average and 13% higher than week 44 last year.
- Thunder Bay terminals unloaded 1,252 cars, 14% lower than the 4-week rolling average and 2% lower than week 44 last year.
- Year to date total western port unloads are 3% higher than the same period last year. The corresponding tonnage is 4% higher.
- The total average terminal out of car time (OCT) increased to 8.3% from 6.1% in the previous week. The OCT time for week 44 was 9% in Vancouver, 1.6% in Prince Rupert, and 10% in Thunder Bay.

Shipments: (Page 7)

- Vessels cleared from Vancouver were 7, and from Prince Rupert were 2 in week 45 of the 2016-17 crop year.
- Year to date Western Canadian shipments from port terminal elevators at week 44 are 2% lower than the same period last year and 7% higher than the 5-year average.

Vessel Lineups: (Page 8)

- Week 45 lineup at Vancouver decreased to a total of 22 vessels (The current one-year average at Vancouver is 22 vessels). Of the 22, 6 were at berth, 12 were anchored at English Bay, and 4 were anchored along the south shore of Vancouver Island.
- Prince Rupert vessel count remained at a total of 5 vessels (The current one-year average at Prince Rupert is 4 vessels).

2. Rail Related Performance

Special Note to readers: CP discontinued publishing weekly railcar spotting plans in week 12 of the 2014-15 crop year (GCRS Service Report). Consequently the GMP does not have access to reliable order fulfillment data after that period.

CN continues to publish a weekly plan and the graphs below reflect CN's plan to week 46 of 2016-17.

Note that the orders accepted do not necessarily reflect shipper demand, but rather the railways' acceptance of shippers' car orders.

2-A CN Railway Planned Car Allocation vs. Demand – To Week 46 2016-17 CY

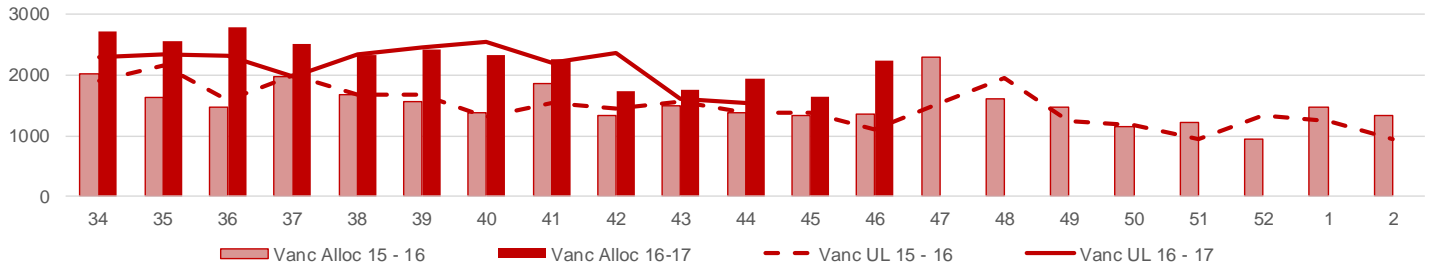

Allocation vs. Unload Performance

Presently only CN provides detailed order-fulfillment data by corridor, although their weekly order-book report and data on actual cars supplied is provided monthly. CP provides neither weekly plans nor monthly disaggregated order-fulfillment data. As such, CP's current-year car allocation summaries for Vancouver and Thunder Bay are not reflected in the accompanying graphs below.

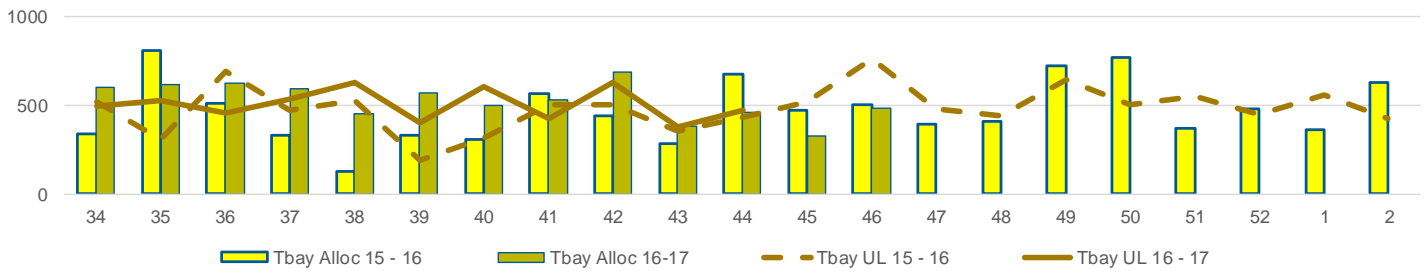

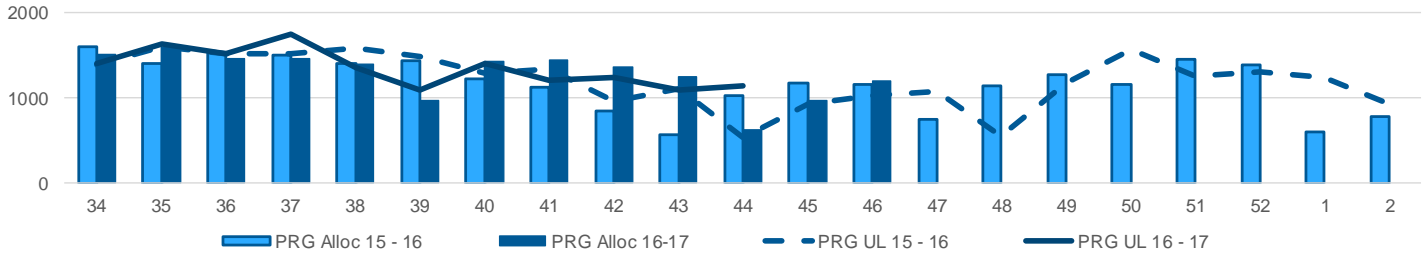

Based on the assumption that cars spotted and loaded in the country one week will be unloaded at port the following week, the ensuing graphs depict a comparison of the planned railway car allocation, by week in each port corridor, to the cars unloaded at port the following week. When both railways provide the order fulfillment data requested with the expansion of the GMP mandate, which was announced on February 3, 2014, a complete set of metrics will be presented.

The following review pertains to the allocation of CN movements in the 2014-15, 2015-16 and 2016-17 crop years, while allocation for CP is unavailable. These are compared to current weeks' unloads in each of the major Western Port Corridors.

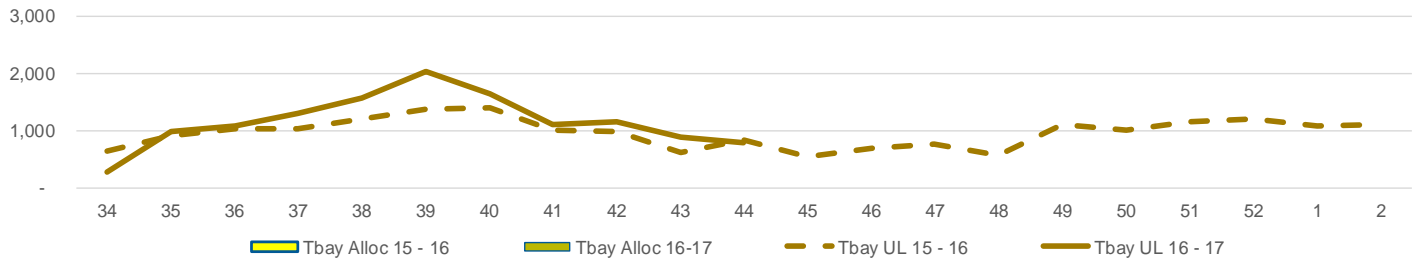

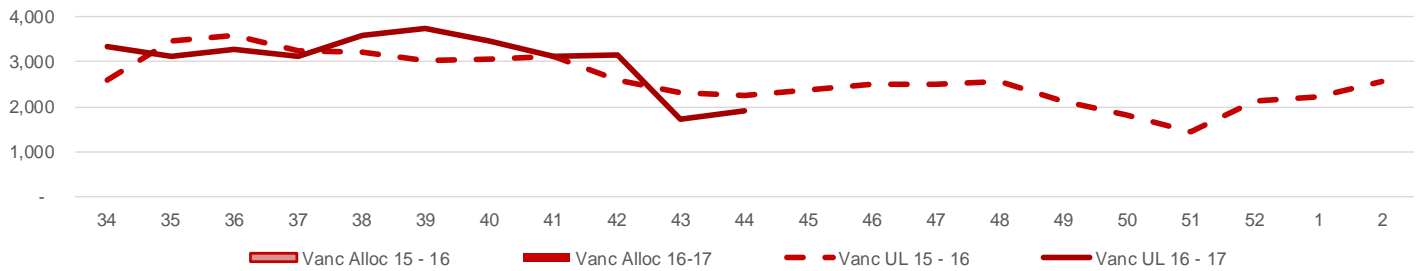

2-B Canadian National Planned Car Allocation to Western Ports vs. Corridor Unloads at Port

Note: Railway allocation of cars to Vancouver include cars destined to transloaders which ARE NOT included in the weekly unload statistics. On average, this accounts for 100-150 cars weekly.

2-C Canadian Pacific Planned Car Allocation to Western Ports vs. Corridor Unloads at Port

3-G Weekly Out of Car Time – (% of hours out of cars/total hours working) – by Port to Week 44

Out of car time is measured weekly and uses data reported by terminal elevators on the total number of hours the facilities are open and staffed (including overtime hours) and the corresponding number of hours that terminals have no rail cars available to unload. The measure is expressed as a percentage (hours without cars to the total number of hours working).

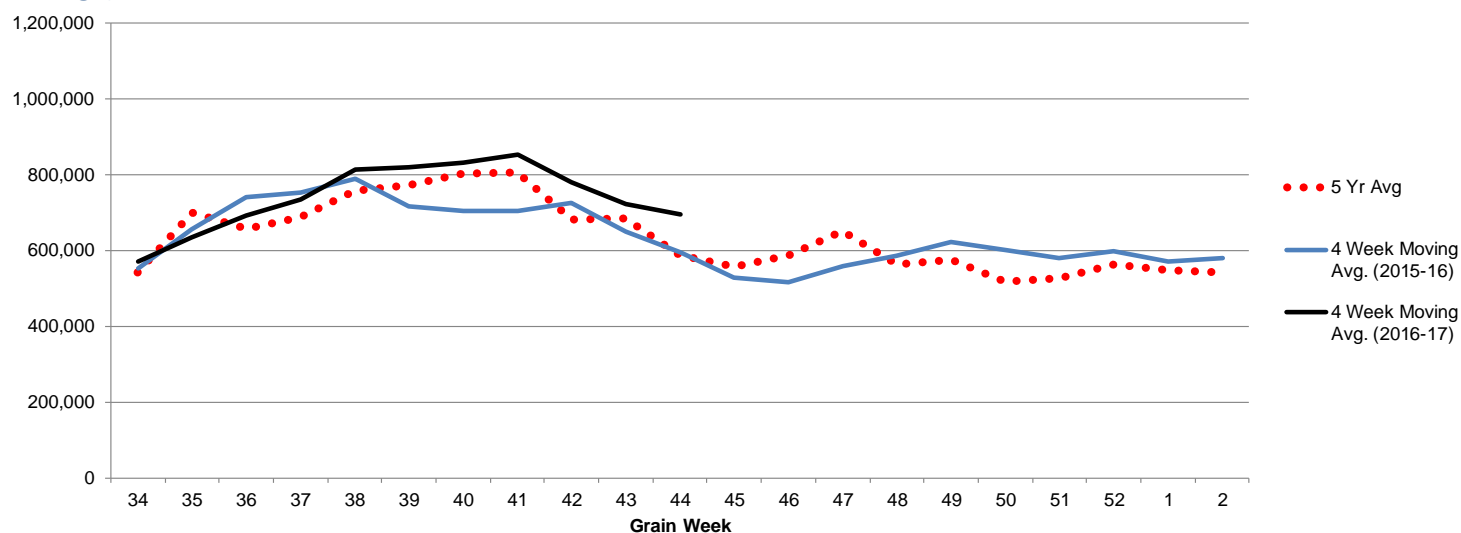

4. Shipments

4-A Shipments from Port Terminals (Tonnes) – This Year as of Week 44 and Variance to Last Year
