3. Railway Car Supply

Special Note to readers: CP discontinued publishing weekly railcar spotting plans in Week 12 of the 2014-15 crop year (GCRS Service Report). CN continues to publish a weekly plan and the graphs below reflect CN's plan to Week 32 of 2017-18. Note that the orders accepted do not necessarily reflect shipper demand, but rather the railways' acceptance of shippers' car orders. When both railways provide the order fulfillment data requested with the expansion of the GMP mandate, which was announced on February 3, 2014, a complete set of metrics will be presented.

Out of car time is measured weekly and uses data from terminal elevators on the total number of hours the facilities are open & staffed (including overtime hours) and the corresponding number of hours that terminals have no rail cars available to unload. The measure is expressed as a percentage (hours without cars to the total number of hours working).

6. Vessels

6-A Vessel lineup at Vancouver as of Week 31 2017-18

6-C Vessel lineup at Prince Rupert as of Week 31 2017-18

6-B Vessels Cleared at Vancouver up to Week 31 2017-18

6-D Vessels Cleared at Prince Rupert up to Week 31 2017-18

Note: To determine Avg Days in Port, Quorum first establishes which vessels cleared port in each specific grain week. Then, the number of days each cleared vessel spent in port is calculated by subtracting the date of arrival from the date of departure. Lastly, an average of these days is produced for the week, which yields Avg Days in Port. The measure uses vessel data provided by the BC Chamber of Shipping.

7. Weather

7-A Actual & Forecasted Weather at Winnipeg up to Week 32 2017-18

7-B Actual & Forecasted Weather at Edmonton up to Week 32 2017-18

7-C Actual & Forecasted Weather at Vancouver up to Week 32 2017-18

*Note: Precipitation Threshold refers to 8mm of rain; this is a general guideline and is not meant to be a definitive limit. At this level of precipitation vessel loading may be delayed. The duration of the delay will be dependent on the ship design, the duration of rainfall, and the amount of precipitation. Temperature Threshold refers to -25°C. At this temperature an impact on railway operations is likely.

**The Weather indicator has been included to denote any impact that weather may have on the Canadian grain supply chain. The three cities presented above are an indicator of the weather across the GHTS and are not meant to be exhaustive.
